

## ABSTRACT

A remote control transmission monitoring system. A remote control has programming for transmitting a sequence of command codes and a command receiver has programming for determining if the transmission from the remote control included all of 5 the command codes in the sequence of command codes. The programming further functions to generate a signal to cause corrective action to be taken and/or to notify a user that an unsuccessful transmission of the sequence of command codes occurred when the transmission from the remote control is determined to include less than all of the command codes in the sequence of command codes.
